ABSTRACT

A baseball game counter for tracking events and scoring of a game. The events of the game essentially comprise strikes, balls, outs, and change of innings. The counter has a front plate, a rear plate, front plate windows extending through the front plate, rear plate windows extending through the rear plate, and wheels sandwiched between the plates, each wheel corresponding to one of the windows. Indicia is printed atop the windows indicating the specific movement being tracked in that window with its associated wheel. Each wheel has a plurality of numerals that are selectively and individually viewable through its associated window. The user is able to keep count of the various events, as well as the score of the game, by manipulating the appropriate wheel.
